FUNCTION ANNOTATION METHOD

- Step1:
cluster genes on the basis of similarity measures
Select up-regulated or down-regulated genes
- Step2:
Select a reference function frame
- Step3:
Determine the statistical significance of the mapping between cluster (differential genes group) and a functional category.

Welcome to DAVID 6.8

2003 - 2020

The Database for Annotation, Visualization and Integrated Discovery (DAVID) v6.8 [comprises a full Knowledgebase update to the sixth version](#) of our original web-accessible programs. DAVID now provides a comprehensive set of functional annotation tools for investigators to understand biological meaning behind large list of genes. For any given gene list, DAVID tools are able to:

- ✓ Identify enriched biological themes, particularly GO terms
- ✓ Discover enriched functional-related gene groups
- ✓ Cluster redundant annotation terms
- ✓ Visualize genes on BioCarta & KEGG pathway maps
- ✓ Display related many-genes-to-many-terms on 2-D view.
- ✓ Search for other functionally related genes not in the list
- ✓ List interacting proteins
- ✓ Explore gene names in batch
- ✓ Link gene-disease associations
- ✓ Highlight protein functional domains and motifs
- ✓ Redirect to related literatures

NETWORK VISULAZATION

Graph Theory

SMALL WORLD

- Six degrees of separation

Steps ≤ 6

常用网络参数

| | |
|------------------------------|--|
| Degree | How many links a node has to other node. Find hubs. |
| Betweenness centrality(BC) | Find important node as bottlenecks in a network. |
| The edge BC | Reflect edges role instead of nodes. |
| The closeness centrality(CC) | Indicate which node is close to the topological center of the network. |

CYTOSCAPE?
